Solve Rate of Change Problems in Calculus. Calculus Rate of change problems and their solutions are presented. Use Derivatives to solve problems: Distance-time Optimization. A problem to minimize (optimization) the time taken to walk from one point to another is presented. Use Derivatives to solve problems: Area Optimization. A problem to maximize (optimization) the area of a rectangle with a constant perimeter is presented.

[Free Calculus Questions and Problems with Solutions](#)
One answer is that calculus is the mathematics of change. Another is that calculus is a field of mathematics with important applications in science, engineering, medicine, and business. The principle example in this lesson is the classic tangent line problem: the calculation of the slope of the tangent line to a parabola at a specific point.

[Understanding Calculus: Problems, Solutions, and Tips](#)
 $y-3 = 5^{x-1}$. Answer. Find the slope of the line having the equation $y = 2(x - 3)$ and find a point on the line. $y = 2(x - 3)$ is a point-slope equation of the line. Hence, the slope $m = 2$, and $(3, 7)$ is a point on the line. Find the slope-intercept equation of the line through the points $(2, 4)$ and $(4, 8)$.
