This system has seen some innovation, but the general concept is older than hydroponics itself. All you'll need are two containers, your plant of choice, a growing medium, and a wick (hence wicking). SN Tip: Growing medium is inert, which means it won't decay, and it provides no nutritional value to the plant. It exists to provide structural support, and that's about it.

What is Hydroponics: Everything You Need to Know - Hydro ...

In hydroponics there's no soil, so you'll have to manually supply these minerals. The plants will still utilize what they need, but you have to maintain this controlled environment. Hydroponic nutrients are subdivided into primary macronutrients, secondary macronutrients, and micronutrients. You need to supply more of the first two than the last.
