This field guide covers the major resource groups likely to be encountered in the fisheries of Myanmar. This includes stomatopods, shrimps, lobsters, crabs, bivalves, gastropods, brachiopods, sea cucumbers, cephalopods, sharks, batoids and bony fishes. Each resource group is introduced by a general section on technical terms and measurements pertinent to that group and an illustrated guide to orders and families of the group. The more important species are treated in detail with accounts providing scientific nomenclature, FAO names in English and French (where available), local names used in Myanmar, diagnostic features, one or more illustrations, maximum size, and notes on fisheries and habitat. Colour plates for a large number of the species are included. The guide is fully indexed and a list of further literature is appended.

This is the first comprehensive identification guide dealing exclusively with the birds of this region. It covers all the species, including vagrants, found in Ecuador, Columbia, Venezuela, Aruba, Curaçao, Bonaire, Trinidad and Tobago, Guyana, Suriname and French Guiana. Over 2,300 species are described in depth in the text, describing geographical variation, identification, status, habitat, voice and taxonomy. This authoritative book will not only be an indispensable guide to the visiting birder, but also a vital tool for those engaged in work to conserve and study the avifauna of this region, which is of such importance to both the indigenous species and those which pass through on migration. A companion to Birds of Northern South America: An Identification Guide - Plates and Maps Volume 1 and Volume2 available as a shrinkwrapped set: 0 7136 6026 0 £85 'The best field guide ever produced.' Cage & Aviary Birds, June 2007 'An extremely impressive and very valuable contribution to the literature on neotropical birds and I would certainly recommend it to anyone interested in the region.' worldtwitch.com (January 2007)

Archaeobotanical studies constantly encounter the carbonized grains of grasses, cultivated and wild, but the vast diversity of wild species that are potentially present has made identification of archaeological material fraught with difficulties. This volume provides an invaluable tool for mastering these difficulties. Based on years of laboratory study of an extensive reference collection, this book gives expert guidance for the identification and interpretation of grass seeds, focusing on those species that occur in the Near East and Europe.

Now re-published with additional and updated text, the third edition of the renowned guide to British macro lepidoptera contains two new plates of additional species plus a further group of colour plates comparing critical species in a new style to aid identification of groups of moths. The last twenty-five years since the publication of the first edition have seen a steady increase in our knowledge of British macro moths, their distribution, history and habits, and this new edition will bring to both the new and experienced student of the group, the latest overview of current status of resident, immigrant and historical records. Since the publication of the second edition very significant changes in behaviour and distribution, perhaps associated with climate change, have made it desirable to update much of the basic text.

The last 25 years have seen a steady increase in knowledge of British macro moths' distribution, history, and habits. This third edition    now published by Apollo Books    brings together the latest overview of current status of resident, and immigrant moths, as well as historical records. Very significant changes in behavior and distribution, perhaps associated with climate change, have made it desirable to update much of the basic text. The book includes species to new Great Britain and Ireland, as well as historical information. A clear range of illustrations, both drawings and color photographs, provide the basis for identifying moths. The main block of 45 color plates illustrate the size, complete wing patterns, and important forms and variation of moths. New additional plates bring together magnified images of various groups of moths, some separated in the main plates, to help compare similar species and aid identification.

This is the first comprehensive photo-illustrated guide to the caterpillars of butterflies and macro-moths. The book illustrates over 850 different species, or about 95% of resident, extinct, regular or irregular immigrant species to the British Isles. All specimens are photographed in natural situations upon the relevant foodplants, including many varieties indigenous to continental Europe. Many of the species have never been illustrated as caterpillars before, either by artwork or by photography. This work has received unreserved support from the best and most competent entomologists. Though the book illustrates British species, it is most valuable for Lepidopterists all over Europe and especially in North and Central Europe. Never before have so many superb colour photographs of Lepidoptera been brought together in a book. The book should appeal to anyone with an interest in European Macrolepidoptera.

An ecotourism site guide to Costa Rica.

This book from the Nature Travel Guide series is written by Dr Duncan James, a scientist turned writer. It is a birdwatching and mammal-watching site guide to Costa Rica. Note that it is not an identification guide.

With **Birds and Mammals of Costa Rica** you can sprinkle nature highlights into your vacation or follow a complete ecotourism itinerary.

- **Unbiased, curated, practical advice** about where to visit
- **Self-guided nature walks** that include maps, GPS coordinates, clear directions and local wildlife-watching tips
- **Coverage** of San Vito, the Osa Peninsula, the West Coast, Nicoya, Monteverde, Arenal, Sarapiquí, Turrialba, Tapanti, Gerardo, Poas, Irazu, Braulio Carrillo, Tortuguero and Juan Castro
- **Advice for all budgets and travel styles** including ecologies, driving tours and budget backpacking for only \$150 a week
- **Specific help so you can travel independently** and still see mammals such as jaguar, tapir and sloth, achieve a trip list of over 400 species of birds, identify mammal tracks, find and observe naturally-behaving groups of monkeys in the rainforest, follow flocks of colourful birds along secluded trails, experience the magical sounds of the cloud forest and much more

This ebook has effortless navigation with multiple internal links, all maps and photographs in full colour and optimised for electronic readers, colours contrast tested for readability on black-and-white screens and everything included in the download for full use offline.

This book has unique practical advice; empowering you to explore.

Buy this book now to follow in the footsteps of the **Nature Travel Guide** through Costa Rica.
