Principles of Physics is a well-established popular textbook which has been completely revised and updated.

With Contributions FromChelvin Sng (National University Health System, Singapore) & Laurence Lim (Singapore National Eye Centre, Singapore) Many new treatments and diagnostic procedures in ophthalmology have been refined or newly developed during the past four years, a new edition reflecting these changes is most timely. The scope and aim of the book will be consistent with the first edition, which provides a broad review of the specialist ophthalmology examinations for final year ophthalmology residents and trainees. The book deals primarily with key facts and topics that are important from the examination perspective. Only information and facts that are considered relevant and critical to the exams are covered, with topics that may be of scientific interest, but are not commonly tested in exams, specifically left out. Time-challenged readers will also benefit from the knowledge acquired from various other sources or textbooks that are now organized and synthesised in this book. While not meant to replace the standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a "model opening statement," followed first by a classification system to aid organization of facts, and then the core explanation in concise short notes. "Exam Tips" are inserted to provide an insight into techniques of answering different types of questions and when appropriate, a "Clinical Approach" section is also included. In the new edition, topics such as new understanding of disease mechanisms (e.g., genetics of eye diseases), new investigations (e.g., OCT), and novel procedures and treatment (e.g., the use of antivascular endothelial growth factors, new refractive surgical techniques) are covered. This book will be a valuable guide to the final year ophthalmology residents and trainees taking the specialist ophthalmology examinations, particularly for exams with a strong oral or viva component. Although primarily aimed at candidates attempting the British postgraduate exams (FRCS, FRANZCO, MRCS, MRCOphth and FRCOphth), it is also useful for other examination systems (e.g., the American Boards). Many junior residents, in fact, find the information handy during grand rounds.

'My heart wandered through the world constantly seeking after my cure, but the sweet and delicious water of life had to break through the granite of my heart.' When the words of Rumi enter your heart, something softens, breaks, and is subtly reborn. That he wrote the words seven hundred years ago in a medieval Persian world that bears little resemblance to ours makes their uncanny resonance to us today just that much more remarkable. Here is a treasury of daily wisdom from this most beloved of all the Sufi masters-both his prose and his ecstatic poetry-that you can use to start every day for a year, or that you can dip into for inspiration any time you need to break through the granite of your heart.

Physical Education Book

A collection of 18 short vampire tales.

When Ash loses her boyfriend, she is consumed by grief, loneliness, and an overwhelming sense of guilt for her role in not only his death, but the deaths of everyone she has ever loved. Refusing to let anyone in for fear of losing them too, she becomes withdrawn, spending her days reliving the nightmares from her past. Until she meets Luke. Initially scared by his intensity and interest in her, Ash tries to push him away. But as Luke slowly starts to chip away at the walls she's built, Ash finds herself doing the one thing she swore she'd never do again - falling in love. When the familiar feelings Ash had hoped were long buried with her past begin to resurface, she is forced to ask herself if falling in love again is really worth the risk.
