Nulka Anti Ship Missile Self Defense System

An anti-ship missile is a guided missile that is designed for use against ships and large boats. Most anti-ship missiles are of the sea skimming variety, and many use a combination of inertial guidance and active radar homing. A good number of other anti-ship missiles use infrared homing to follow the heat that is emitted by a ship; it is also possible for anti-ship missiles to be guided by radio command all the way. The first anti-ship missiles, which were developed and built by Nazi Germany, u

Nulka Anti Ship Missile Self Defense System

he story of Nulka is, in many ways, several inter-woven stories. It is first and foremost the story of a superb, sustained feat of engineering to introduce into service an electronic decoy system capable of defeating advanced anti-ship missiles. Nulka was never a large project by military standards, but was highly

NULKA - DST

Nulka is an Australian designed and developed active missile decoy built by an Australian/American collaboration. It is a rocket propelled, disposable, offboard, active decoy designed to seduce anti-ship missiles away from their targets. It has a unique design in that it hovers in mid air while seducing the incoming anti-ship missile.

Nulka active missile decoy | Royal Australian Navy

Air-launched from beyond the target vessel ' s horizon, the 4.2m, 90kg EVADER can accurately replicate the flight path and trajectory of a genuine, sea-skimming anti-ship missile, and emulate some terminal manoeuvres. Its training value for naval combat system operators in realistically simulating such threats is incalculable.
