Trees are a classic photography subject. Besides being beautiful, they work great in a wide range of moods, conditions, and genres. They're photogenic in all kinds of weather, from heavy snow to scorching heat, and they work great as the background, foreground, or sole subject of a photo. They have texture, color, and basically everything you could want from a subject.

If you have ever been to a forest and tried to take photos, you probably know that it is not that easy to take a picture that does it justice. Forests are dark and have high contrasts of very deep shadows and bright highlights. The leaves scatter the light, and as a forest is usually not neat and tidy it can be hard to find a composition that works.

Nature photography is a favorite genre of photography, and within nature photography, trees are one of the most common subjects. Trees are widespread, tremendously diverse, and can make both beautiful and majestic subjects. Photo by peaceful-jp-scenery (busy); ISO 200, f/13.0, 1/50-second exposure. In some respects, trees are also easy to photograph: they are widely visible and, unlike animals, they sit still, allowing you to carefully compose exactly the photo you wish to capture.

The Passion of Trees is a collection of photographs taken in Iran and Azerbaijan's stunning nature. However, this is a collection of nature photographs with a difference. Over the years, Ali has witnessed the beauty of the forests that he has loved since his childhood severely decline. As the number of roads and dams have increased, and more and more of the forests have been destroyed, the situation has become increasingly desperate. "To me, each tree, like a human being, has a tale to tell. When a tree dies, a whole story is interrupted, a destiny is altered for the worse. I feel as if the trees, bundled in the back of trucks, are cursing us with

their broken hands, wounded faces and severed roots." The Passion of Trees is Ali's stark reminder that the natural world deserves our care.

Through his photography, Ali encourages viewers to consider the world around them and to look upon nature with a different perspective, to consider the very real possibility that without swift action, the devastating effects of climate change and the decline of countless animals and plants.

historical trees with remarkable stories from around the world. Supported by grants from the Expedition Council of the National Geographic Society, Cook and Jenshel spent two years traveling to fifty-nine sites across five continents to photograph some of the world's most historic and inspirational trees. Trees, they tell us, can live without us, but we cannot live without them. Not only do trees provide us with the oxygen we breathe, food gathered from their branches, and wood for both fuel and shelter, but they have been essential to the spiritual and cultural life of civilizations around the world. From Luna, the Coastal Redwood in California that became an international symbol when activist Julia Butterfly Hill sat for 738 days on a platform nestled in its branches to save it from logging, to the Bodhi Tree, the sacred fig in

India that is a direct descendent of the tree under which Buddha attained enlightenment, Cook and Jenshel reveal trees that have impacted and shaped our lives, our traditions, and our feelings about nature. There are also survivor trees, including a camphor tree in Nagasaki that endured the atomic bomb, an American elm in Oklahoma City, and the 9/11 Survivor Tree, a Callery pear at the 9/11 Memorial. All of the trees were carefully selected for their role in human dramas. This project both reflects and inspires awareness of the enduring role of trees in nurturing and sheltering humanity. Intimate in size yet quietly breathtaking in scope, this graceful gift book will forever change how you think, and how you feel, about trees. In poetically sparse scientific observations, renowned conservation biologist Gretchen Daily narrates the evolution, impact, and natural wonder of trees. Alongside photographs by Chuck Katz, the text and images form a quiet and moving meditation on *The Power of Trees*. Twenty-six duotone black and white photographs illustrate the development of trees: how trunks were formed, what tree rings tell us about human societies, and how trees define the future of humanity. Pictures of trees threading through the landscape - dotting mountainsides, braiding along the sides of glassine rivers - bear witness to the lyrical force and clarity of Daily's observations. Recreating the

authors' hike together through the landscape of the Skagit River in Washington State, the balletic movement between Daily's commentary and Katz's vision reaches out to readers, inviting them to enjoy the landscape through a scientific understanding of trees. At once emotional and intellectual, *The Power of Trees* is the first collection of nature photographs that invites the reader to not only delight in the gorgeous play between light and shadow, but also the fascinating natural mechanisms that create such striking natural beauty. An ecologist by training, Gretchen Daily is an internationally acclaimed conservancy advocate and scholar. We see thoughtful portrayals of trees that have survived by sheer hardiness or luck, standing poised on the edge of northern wilderness, isolated on a golf course, or pardoned by the mark of a forward-thinking logger. Three gatefolds display Balog's signature multi-image works. With accompanying essays by the photographer, this pictographic volume truly delivers a new vision of American trees.
