Without a power attenuator or master volume control, a 15-watt valve amp will likely be too loud for home use – even a five-watt tube amp can be enough to make the neighbours bang on the walls. If you do have concerns about noise levels, you might want to check out a digital alternative for home practice instead. Other points to take note of are clean headroom and tonal characteristics.

Tube amps — also known as “valve amps” — use vacuum tubes to amplify your guitar signal, and were the first type of electric guitar amplifier. They have a distinctive warmth, and are very responsive to playing dynamics — turning the guitar's volume down or playing softer can produce a cleaner sound, and turning up or playing harder makes the tone more aggressive.
